Priority risks

Legal interests and site conditions remain unverified

Unverified interests or physical conditions may change the feasible pool position, design, cost, or approval path.

An apparent candidate crosses a mapped overland flow path

Obstructing or redirecting overland flow may increase flood effects and prevent the indicated placement.

Property overview

Mapped property evidence

Official geometry returned during this session. Missing evidence is shown as unavailable and is not inferred.

Feasibility category status

Category	Status	Score	Rationale
available space	scored	25 / 25	Large is the largest successfully placed pool shell.
underground services	scored	20 / 20	The nearest mapped service is 279.2 metres from a screened envelope.
flooding and drainage	unknown	— / 20	Required mapped screening evidence remains unknown.
terrain and slope	unknown	— / 15	Required mapped screening evidence remains unknown.
planning constraints	scored	10 / 10	Available mapped screening evidence did not trigger this constraint.
construction access	unknown	— / 10	Desktop construction-access evidence is unavailable.

What needs attention next

Material risks

Legal interests and site conditions remain unverified

The desktop assessment does not include a current title review, easement verification, geotechnical investigation, groundwater investigation, or onsite service locating.

Action: Complete title review, specialist site investigations, and onsite service locating before relying on a concept design.

An apparent candidate crosses a mapped overland flow path

An apparent candidate area crosses a mapped overland flow path.

Action: Obtain specialist flood and drainage review before progressing a concept design.

Prioritised actions

Before Concept Design	Review the current title, easements, covenants, and consent notices.
Before Concept Design	Obtain BeforeUdig plans and locate all private and public services onsite.
Before Quotations	Confirm geotechnical, groundwater, retaining-wall, and construction-access conditions.
Before Consent Or Construction	Confirm the final pool barrier and all building, resource, Works Over, and other approval requirements.

Missing information

- Current title interests and covenants
- Registered and unregistered easements
- Private stormwater and wastewater services
- Exact public/private water, drainage, gas, and electricity service position and depth
- Consent notices affecting the property
- Geotechnical conditions
- Groundwater conditions
- Retaining-wall condition and influence

Assumptions and limits

Based on available mapped information, the property appears to have potential for a residential swimming pool, subject to onsite investigation, detailed design, utility locating, title review, and applicable approvals.

This assessment does not provide approval, consent advice, engineering design, construction safety assurance, a survey, title advice, utility location, or an approved pool position. Vector open electricity and gas geometry is preliminary reference evidence only and may be incomplete or inaccurate; obtain BeforeUdig plans and onsite locating before excavation or design reliance.

This preliminary desktop assessment is not approval, engineering design, a survey, title advice, utility location, or an approved pool position.
