

135 Fiddlers Hill Road

Puhoi 0994 - Auckland

OVERALL STATUS **NEEDS CHECKING**

Potential exists, but terrain, drainage, title and construction access are not cleared by the desktop result.

Oblique LINZ aerial draped over terrain. White = parcel; blue = illustrative pool; red = matched address point.

Manual conclusion

The address and parcel match successfully. The 3.57 hectare title contains broad open areas, and the system can geometrically fit a large pool shell. However, that fit is plan-view only. The real aerial shows a rural hillside property with vegetation, formed access and existing buildings. A buildable pool location cannot be confirmed until slope, earthworks, drainage, wastewater, legal interests and vehicle access are checked onsite.

PARCEL

Lot 2 DP 489596

TITLE AREA

35,693 m2 (3.57 ha)

RECORD OF TITLE

704732

What the property data actually shows

The top-down view is the reference for boundary context and approximate placement. The 3D view is for terrain context only and must not be used for measurement.

Illustrative pool footprint only - not surveyed, engineered or approved. Placement may be invalid after site checks.

System result, translated

Address and parcel	VERIFIED	Exact LINZ address match; selected point falls within Lot 2 DP 489596.
Geometric space	INDICATED	Engine returned about 35,164 m2 of plan-view candidate area and fitted a 9 x 4 m shell. This is not level or constructible area.
Terrain and slope	NEEDS CHECKING	No engineering-grade slope result was available. The 3D aerial shows meaningful relief around the site.
Flooding and drainage	NEEDS CHECKING	The saved assessment flagged an apparent overland flow-path conflict; specialist confirmation is required.
Construction access	NEEDS CHECKING	A formed driveway is visible, but truck, crane and excavation access were not assessed.
Utilities and services	PARTIAL	Public mapped services did not block the screen; private water, wastewater, drainage and power still require locating.

What to do before pricing a pool

Use the report as an address-screening brief. Do not treat the blue footprint as the chosen pool position.

1

Confirm title constraints

Review title 704732, easements, covenants, consent notices and legal access.

4

Verify drainage

Confirm the apparent flow-path flag and plan stormwater without worsening runoff.

2

Survey the candidate zone

Record levels, boundaries, buildings, retaining and required setbacks.

5

Locate all services

Obtain BeforeUdig plans and locate private wastewater, water, power and drainage onsite.

3

Check ground conditions

Geotechnical review for cut/fill, retaining, bearing, stability and groundwater.

6

Prove construction access

Check excavator, spoil removal, concrete delivery and crane routes before quotation.

Recommended next decision

Proceed to a site visit and levels check - not directly to quotation.

A site visit should identify one or two genuinely level or economically terraceable zones, then the pool footprint can be repositioned without hiding conflicts.

Sources used

- LINZ NZ Addresses - address ID 1517831 - exact matched address and point geometry.
- LINZ NZ Primary Parcels - parcel ID 7625496 - Lot 2 DP 489596 and parcel geometry.
- Toitu Te Whenua LINZ Basemaps - aerial imagery and terrain tiles - CC BY 4.0.
- Saved system assessment - plan-view candidate fit, mapped-service screen and flow-path warning.

LIMITATIONS

This is a preliminary desktop review, not approval, consent advice, engineering design, a survey, title advice, utility location or an approved pool position. Aerial imagery can be dated or distorted. The 3D perspective is contextual and the illustrated pool has not been checked for setbacks, earthworks, barriers, services, wastewater or buildability.
